

WEB DOMAIN

<https://charlesluis1724-a1ly.github.io/Charles-Assignment/index.html>

Observation

HOME PAGE

"Home Page" responsiveness should be fine @ 1040px upto 2560px. Tablet and mobile device are not currently available due to short period of time.

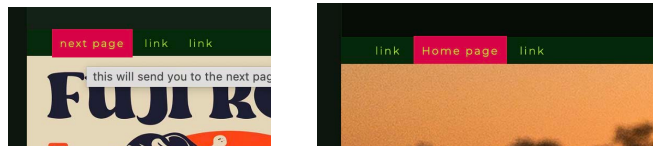

BODY

- Notice that the Background image is purposely Fixed for visualization. Only to show that Background image is Available. However it's better to maintain the background on Plain or clean color to give contrast to the content page and make the Interface more accessible to Users. I did change it though on the "Blog Page".

NAVIGATION

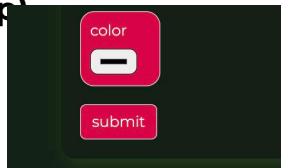

-(index.html) try to click "Next Page" to go to the "Blog page".

-(index_page2.html) Try to click "Home Page" to go back to the "Home page".

FORM

"SUBMIT Button" does not go to page 2 (tried to research but found out it needs to be linked to (Java Script))

-bypassed bootstrap setting for border (default - blue) to (WHIT)

```
.btn-hover {  
  color: var(--bs-btn-hover-color);  
  background-color: var(--bs-btn-hover-bg);  
  border-color: var(--bs-btn-hover-border-color);  
}  
[type=button]:not(:disabled),  
[type=reset]:not(:disabled),  
[type=submit]:not(:disabled),  
button:not(:disabled) {  
  cursor: pointer;  
}  
  
.btn-primary {  
  border-color: #ffffff;  
}  
.submit-btn {  
  background-color: #000046;  
}
```

Blog Page

The Website is Available at 2560px and not responsive like the Home Page. the Goal of the Assignment should be responsive but it didn't get other aspect ratio's due to short period of time

I tried to be relevant to the main design system however along the way I found new styles and would like to implement it to other components of the website. I understand the design fundamentals but tried to keep it relevant to each other For me it is important how I understand each tags, element, and behaviors are workings. Next I will be sticking to only one design system.

GOAL of the WEBSITE

The Goal of the Website is to provide News, Blogs, Vlogs, E-Commerce, Purchase and Checkout pages for users. It's on its first stages yet, but will add more pages in the next days. The Website is intended to Music Enthusiast especially guitar players but soon will eventually show other musical instruments along the way.

The Website should be able to showcase:

- Music Theory for Beginners.
- wide options of available guitar instruments.
- latest news and upcoming events.
- and a "game page" where users get to win prizes.

The page is still not refined but the Idea is showed there already. I put "Placeholders" to fill areas that needs content in the future.

The Design system used to this are very limited. I choose "Dark Green" for dark theme and vice versa there will be a Light Theme available soon!.

Some elements are highlighted in "Neon Green" for background contrast.
